

Supporting Unsupported Learning Technology

We are skilled and experienced in taking over an unsupported software and modernizing it to meet the latest standards and requirements. Such projects are done as an ongoing work for a year or longer where our experts gradually turn around the software and user sentiments through sustained engineering and technical support.

We specialize in protecting your technology investment.

We make your technology deliver its promise.

Case Studies

Take Over and Maintenance of PublishThis! – Microsoft’s Publisher for TechNet

The team that had developed and supported the product had moved on. When Vidyatech came on, the product was unreliable and was getting a lot of negative feedback. It had to be enhanced and made the publishing system of choice for Microsoft content teams. Vidyatech took over the product code and steadily worked on all its bugs and limitations. More and more users started using the system. A product that was expected to die in a year or two, went on strongly for almost a decade with steady rise in userbase.

“I have worked with Vidyatech now for a few years and would recommend them to other teams needing technical expertise and proven PM skills. They have worked on a variety of projects for us including publishing content to MSCOM, content migration to MTPS, designing and developing Web applications and automation tools, and sustained engineering of our publishing software. Their responsiveness, quality of work, and quick turnaround make them valuable assets in a difficult project. “

Nathan Pirone, Program Manager-TechNet MSDN, Microsoft

Take Over and Maintenance of Community Apps

Vidyatech took over Microsoft’s existing community applications including Chat, Forums, Blogs, and Smart Components. These applications were running into a lot of problems with user dissatisfaction. Vidyatech studied the applications, documented them, and steadily worked at resolving all the issues. In a period of 7-8 months Vidyatech was able to turn around the users. Vidyatech went on to maintain these apps for many years.
